2. Status Settings

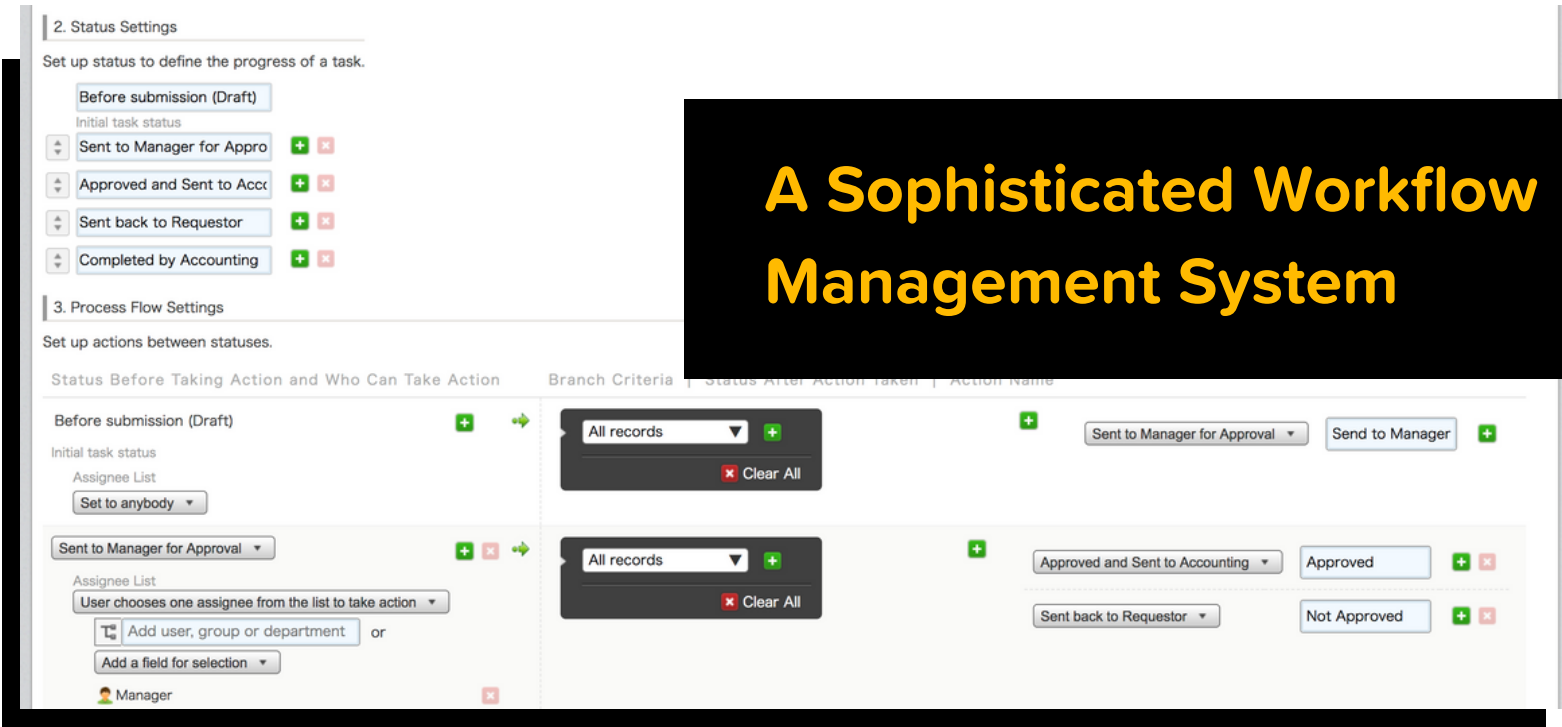

Set up status to define the progress of a task.

- Before submission (Draft)
- Sent to Manager for Appro
- Approved and Sent to Acco
- Sent back to Requestor
- Completed by Accounting

3. Process Flow Settings

Set up actions between statuses.

Status Before Taking Action and Who Can Take Action	Branch Criteria	Status After Action Taken	Action Name
Before submission (Draft)	All records	Sent to Manager for Approval	Send to Manager
Sent to Manager for Approval	All records	Approved and Sent to Accounting	Approved
		Sent back to Requestor	Not Approved

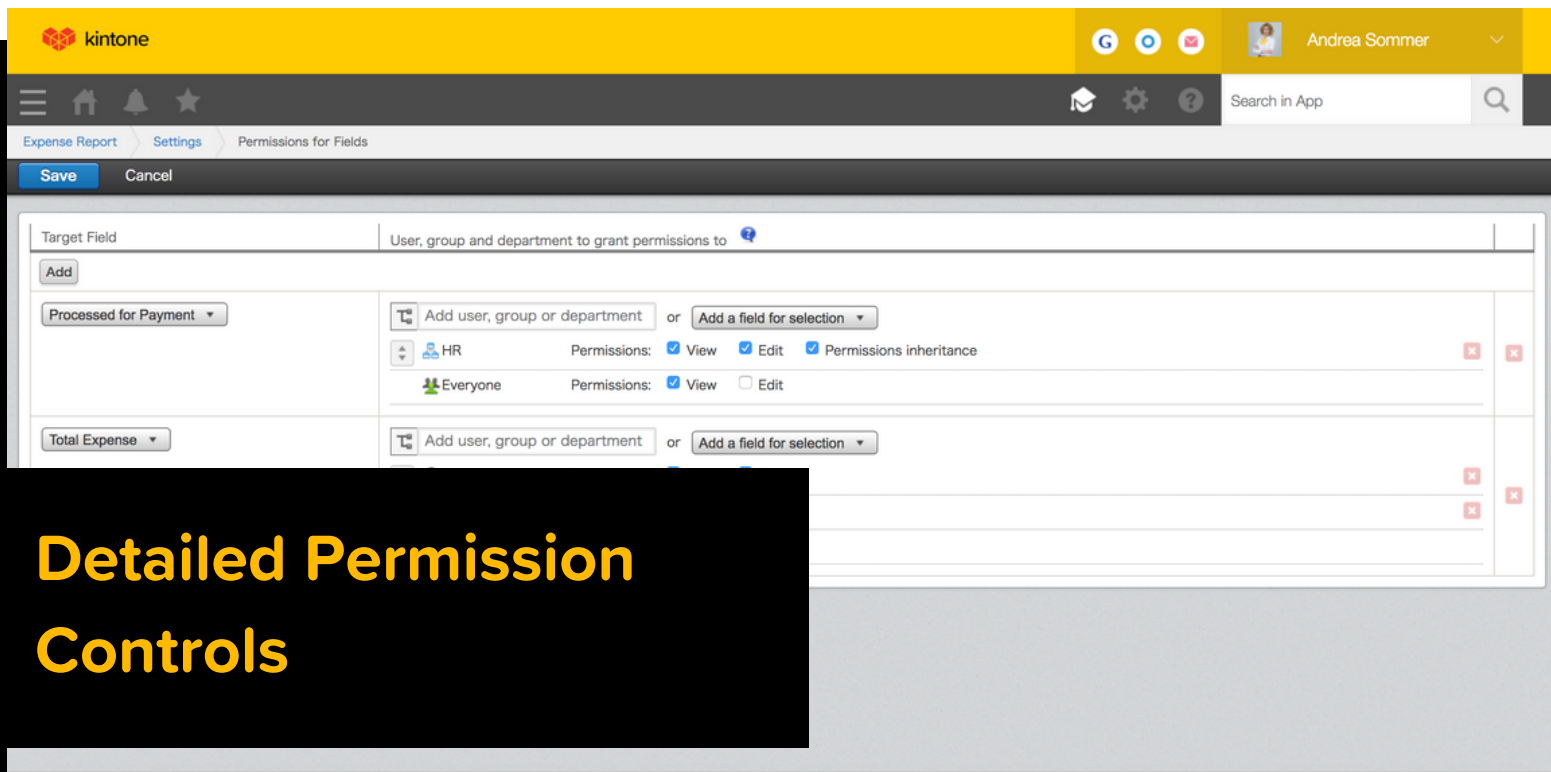

A Sophisticated Workflow Management System

Your workflow is complex. That doesn't mean it has to be complicated. Kintone's robust settings give you the power to create efficient workflows you control at every step of the way.

With Kintone you can design your workflows to do exactly what you need without any repetitive or non-essential steps. Once you've created your process, you can automate it to move from one phase to the next as each team member completes their task. Kintone's platform also features workflow branching, giving you finite control over every aspect of your process no matter what the circumstances.

But workflow efficiency doesn't end there; you can use Kintone's history settings to review and adjust workflows at any stage without interrupting automation. From project progress to how long it takes each team member to complete their task, you can conduct a detailed analysis of your workflow to make sure you're making the most of your resources.

Sensitive information and software don't always go together. Many database solutions don't give their users the ability to track and monitor data on a granular level. Kintone does.

Kintone helps break the cycle of minimal oversight with sophisticated permissions tools that let you track, review, and control who sees what. With Kintone, managers can set up user access limits on a team, department, or individual level. For data, limits can be placed on an app, record, or individual field level.

Kintone's permission controls let you manage your data from both the inside and out.

An Extensive Support Network

From onboarding to development partners, Kintone has your back at every step of the way. You're not buying a product--you're joining a network of people dedicated to helping you build your perfect database solution.

Here's how it works: when you join, Kintone assigns you a personal Customer Support Specialist to help onboard you and your team. Our tailored onboarding program makes sure you and your team get the training you need to get the most out of Kintone's platform before you get started. Once you graduate onboarding, you can continue to learn more about Kintone's features through our weekly customer training videos.

If you need advanced customization, we'll connect you with our trusted platform partners. Our partner network includes:

Implementation Partners: these partners help Kintone users who need to redesign their workflow structure from scratch but aren't sure where to start.

Technology Alliance Partners: if you have other software platforms that need to integrate with Kintone for your best workflow experience, look no further.

Plug-in Partners: if you love Kintone but want someone else to build it out for you, our Plug-in Partners are up to the task.

No matter what your need, Kintone has your back. From onboarding to advanced customization, we make sure you're never alone on your journey to a better database solution.

“

Anybody can build an app in Kintone, from programmers to non-technical end users.

”

- Betsey Thurlo, Network Administrator at McCormick Distilling
